

Amendments to the Specification

Please amend the specification by substituting Para. [0022] of the published application with the following paragraph.

[0022] Furthermore, a guide rod 25 parallel to the spindle 9 is disposed in the crank chamber 10. The guide rod ~~24-25~~ has one end and the other end rotatably supported by the cylinder block 2 and the front end plate 4, respectively. The guide rod ~~24-25~~ is clamped by a clamping portion 26 of the wobble plate 16. Thus, the wobble plate 16 is prevented from rotation (rotation around its own axis) and performs wobbling motion alone.

Please amend the specification by substituting Para. [0026] of the published application with the following paragraph.

[0026] Further, each of the pistons 23 is provided with a plurality of piston rings 45 in frictional contact with the cylinder bore ~~42-22~~. At a center portion of the cylinder block 2, a control valve 40 for controlling communication between the crank chamber 10 and the suction chamber 43 is disposed as illustrated in FIG. 1.
